About Me

.NET Backend Developer with production expertise in CQRS, MediatR, EF Core, Dapper, ASP.NET Core, and .NET 4/5/8. developed full-stack solutions with React + TypeScript and Razor Pages. Focused on clean code, sound REST API design, and maintainable systems in agile teams; familiar with Docker, RabbitMQ, CI/CD, Jira, and Bitbucket.

Work Experience

Associate Software Developer

Aug 2025 – Present

CodeBee Nepal · Full-time | Kathmandu, Nepal · On-site

Backend Development (ASP.NET)

- Developed and maintained APIs using ASP.NET Web API with .NET 4 and .NET 5 (legacy) frameworks, applying CQRS pattern for structured and maintainable codebases.
- Led migration of legacy .NET projects to .NET 8, ensuring backward compatibility and improved performance.
- Managed database operations and wrote efficient queries using EF Core and raw SQL.

Frontend Development

- Built and maintained UI modules using Razor Pages and JavaScript for server-side rendered web applications.
- Developed cross-platform mobile and desktop applications using .NET MAUI.

Project & Version Control (Bitbucket / Jira)

- Used Bitbucket for source control and pull request workflows to ensure code quality and team collaboration.
- Tracked tasks, sprints, and bug reports using Jira for agile project management.

Full Stack Engineer

May 2025 – Aug 2025

Avenir Tech · Full-time | Hetauda-10, Bhutandevi Road · On-site

Backend Development (ASP.NET & FastAPI)

- Developed RESTful APIs using ASP.NET Core and Python (FastAPI), adhering to Clean Architecture principles.
- Managed database operations with EF Core and SQL Migrations.

Version Control (GitLab / Clickup)

- Performed rebasing to maintain clean commit history and resolve conflicts efficiently.

Full Stack Developer

Sep 2024 – May 2025

Kutumba Tech Pvt. Ltd. · Full-time | Kathmandu · Remote

Backend Development (.NET, Django)

- Built scalable APIs using .NET and Django, adhering to MVC and Carter Architecture principles for scalable, maintainable codebases. Managed database migrations using EF Core and Django ORM.
- Implemented real-time features using SignalR and integrated Google Maps API in location-tracking modules.

Version Control (GitHub / Slack)

- Utilized GitHub for collaboration, performing rebasing to maintain clean commit histories in team workflows.

Internships

Full Stack Developer

Mar 2024 – Sep 2024

Kutumba Tech Pvt. Ltd. · Internship |

- Developed RESTful APIs using ASP.NET Core, following Clean Architecture + CQRS design for scalable, maintainable codebases.
- Built modular backend systems with MediatR, Dapper, and integrated authentication using JWT.

- Established CI/CD pipelines in GitLab to automate code testing, integration, and deployment workflows.

Education

Hetauda School of Management and Social Sciences, Hetauda

Bachelor in Information Management (BIM)

+2 Commerce

April 2020 – 2025

2019 – 2020

Skills

ASP.NET MVC • ASP.NET Web API • .NET 4/5/8 • .NET MAUI • Razor Pages • Python • Postman • React + TypeScript • CI/CD • Docker • RabbitMQ • EF Core • Dapper • MediatR • CQRS • JWT • SignalR • Jira • Bitbucket • GitHub • GitLab • MS Office Suite

Certifications

- Basic of Python, Hetauda School of Management and Social Sciences (HSMSS) (Bootcamp)
- IoT Training, enCypher Technologies Pvt. Ltd.
- MS-Word Specialist Nepal Championship

Projects

Library Management System

ASP.NET Core | Dapper | MediatR | CQRS | JWT | React + TypeScript

- Designed and developed a full-stack library management system with a separate ASP.NET Core backend API and a React (TypeScript) frontend.
- Implemented backend features using Dapper, Stored Procedures, AutoMapper, MediatR, and CQRS pattern for maintainable command/query separation.
- Secured the application with JWT-based authentication and authorization, and configured CORS for safe cross-origin API access.

RabbitMQ Order System

ASP.NET Core | RabbitMQ | Clean Architecture | Docker | C#

- Built a distributed order processing system using ASP.NET Core, structured across Clean Architecture layers: Api, Application, Domain, Infrastructure, and a dedicated Worker service.
- Integrated RabbitMQ as a message broker to handle asynchronous order events between the API and background worker, ensuring decoupled and resilient processing.
- Containerized the application and RabbitMQ broker using Docker for consistent local and production deployments.

Single Sign-On (SSO) System

ASP.NET Core | TypeScript | T-SQL | JWT | C#

- Created a centralized SSO authentication solution that unifies several separate programs, including the Student Management solution and the Library Management System, under a single Auth Server.
- Built the Auth Server in ASP.NET Core to issue and validate tokens across client applications, enabling seamless cross-app authentication.
